

EXPERIMENT 4

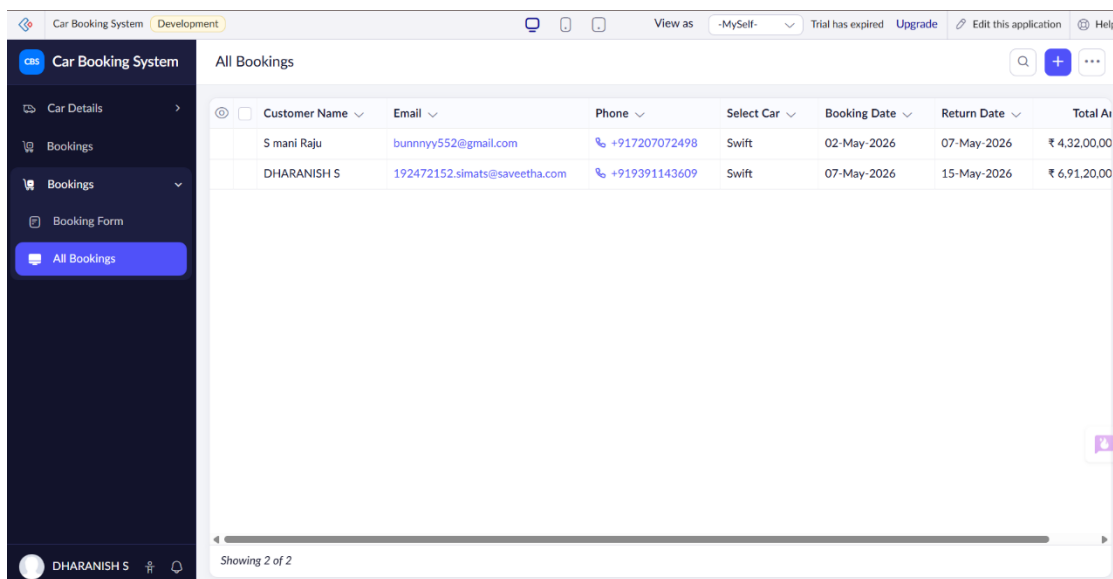

Car Booking Reservation System

Aim: To design a cloud-based Car Booking System using Zoho Creator.

Procedure:

1. Create a new application.
2. Design Car Booking Form.
3. Add fields: Name, Car Type, Location, Date, Days, Price.
4. Apply field validations.
5. Create workflow to calculate total price.
6. Test booking with sample data.
7. Share the application as SaaS.

Output:

The screenshot displays the Zoho Creator interface for a 'Car Booking System'. On the left is a dark sidebar with navigation options: 'Car Details', 'Bookings', 'Bookings' (with a dropdown arrow), 'Booking Form', and 'All Bookings' (highlighted in blue). The main area is titled 'All Bookings' and contains a table with the following data:

Customer Name	Email	Phone	Select Car	Booking Date	Return Date	Total Amount
S mani Raju	bunnnyy552@gmail.com	+917207072498	Swift	02-May-2026	07-May-2026	₹ 4,32,00.00
DHARANISH S	192472152.simats@saveetha.com	+919391143609	Swift	07-May-2026	15-May-2026	₹ 6,91,20.00

At the bottom of the table, it says 'Showing 2 of 2'. The top of the interface shows the application name 'Car Booking System', a 'Development' tag, and various utility buttons like 'View as', 'Trial has expired', 'Upgrade', 'Edit this application', and 'Help'.

Result: A cloud-based car booking system was successfully implemented with booking features.
