

EXPERIMENT 5

Library Book Reservation System

Aim: To develop a Library Book Reservation System using Zoho Creator to demonstrate SaaS.

Procedure:

1. Create a new application.
2. Create Book Details Form and Book Reservation Form.
3. Add fields like book name, author, ISBN, student details.
4. Set validations (mandatory, no duplicate ISBN).
5. Add workflow for approval/rejection based on availability.
6. Test the reservation process.

Output:

The screenshot displays the 'SIMATS Library Reservation System' interface. On the left is a dark sidebar with navigation options: 'Book Details', 'Book Reservations', 'Book Reservation', and 'All Book Reservations' (highlighted in blue). The main area is titled 'All Book Reservations' and contains a table with three columns: 'Student Name', 'Register Number', and 'Book Details'. The table lists three reservations for the book 'Data Structures'. At the bottom, it indicates 'Showing 3 of 3'.

Student Name	Register Number	Book Details
S.B.Sabesh	192472153	Data Structures
S. Mani Raju	192411100	Data Structures
S.Dharanish	192472152	Data Structures

Result: A cloud-based library reservation system was created, enabling students to reserve books online.
