

EXPERIMENT 3

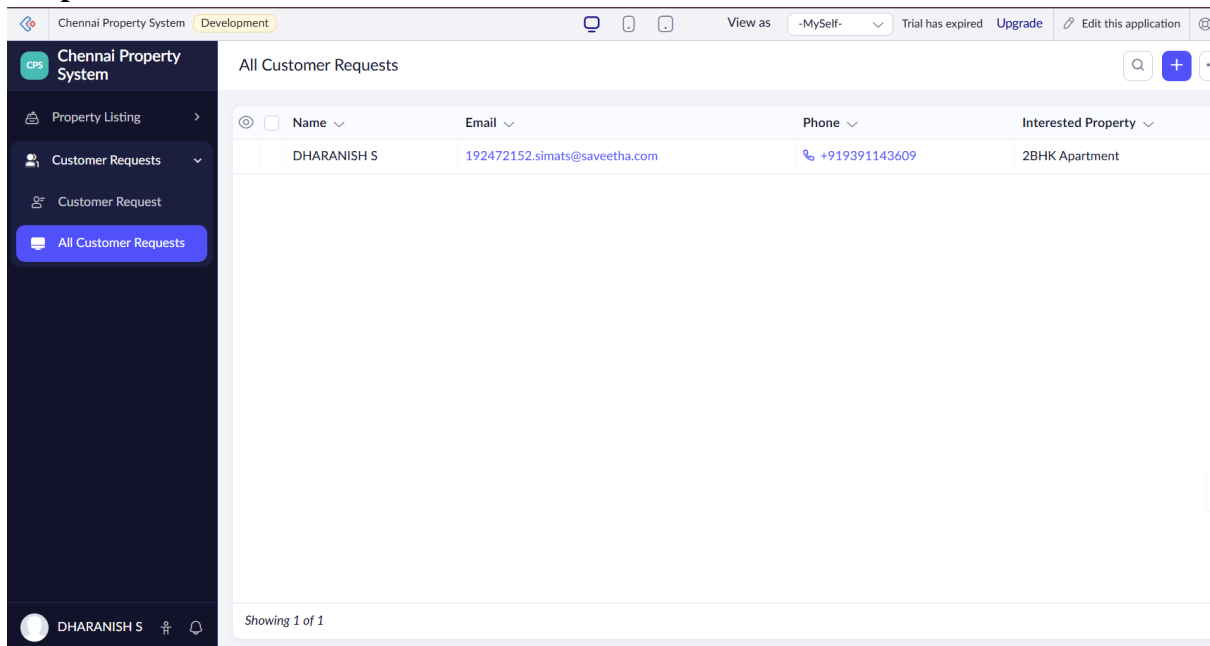

Property Buying & Rental System

Aim: To develop a cloud-based Property Buying & Rental System for Chennai using Zoho Creator.

Procedure:

1. Create a new application in Zoho Creator.
2. Create Property Listing Form (owner details).
3. Create Customer Request Form.
4. Add fields like property type, location, price, contact, etc.
5. Configure validations and dropdown options.
6. Test the application by adding sample properties.

Output:

The screenshot displays the Zoho Creator interface for a 'Chennai Property System'. The left sidebar contains navigation options: 'Property Listing', 'Customer Requests', 'Customer Request', and 'All Customer Requests' (highlighted in blue). The main area shows a table titled 'All Customer Requests' with the following data:

Name	Email	Phone	Interested Property
DHARANISH S	192472152.simats@saveetha.com	+919391143609	2BHK Apartment

At the bottom of the table, it indicates 'Showing 1 of 1'. The top of the interface shows the application name 'Chennai Property System' in 'Development' mode, along with user information and a trial expiration notice.

Result: A SaaS-based property system was developed where users can view and request properties online.
